

TEST SUMMARY REPORT

SauceDemo Manual QA Testing

Testing Type: Manual Functional Testing

Test Environment: Production / Staging

Test Execution Status: Completed

Document Version: 1.0

1. Test Summary

Manual functional testing was conducted on the SauceDemo web application to verify that the selected application functionalities performed according to the expected behavior.

The testing covered the following functional modules:

- Login
- Product Listing
- Product Detail
- Shopping Cart
- Checkout
- Logout

A total of 47 test cases were executed. The execution resulted in:

- 43 test cases Passed
- 4 test cases Failed
- 0 test cases Blocked

The overall test pass rate was 91.49%, while the fail rate was 8.51%.

The failed test cases were primarily related to the display of unclear or truncated error messages. Multiple failed test cases may be associated with the same underlying defect and therefore should not be interpreted as separate defects.

2. Testing Objectives

The objectives of the testing activity were to:

1. Verify that the main SauceDemo functionalities work according to the expected behavior.
2. Validate positive and negative user scenarios.
3. Identify functional and UI-related issues during test execution.
4. Document test execution results and supporting evidence.
5. Record identified defects and their current status.
6. Provide an overall assessment of the application's tested functionality.

3. Test Scope

3.1 In Scope

The following modules were included in the testing scope:

Module	Testing Coverage
Login	Valid and invalid credentials, empty fields, locked user, password masking, keyboard submission
Product Listing	Product display, product information, sorting, and adding products to cart
Product Detail	Product details, product information, adding products to cart, and returning to product listing
Shopping Cart	Adding and removing products, cart badge, product information, and cart navigation
Checkout	Customer information validation, order summary, price, subtotal, tax, total, and order completion
Logout	Logout functionality and session termination

The prepared test cases cover the major user flows within these modules, including both positive and negative scenarios.

3.2 Out of Scope

No additional functionality outside the modules listed above was recorded as part of the planned test case execution.

4. Test Environment

Item	Details
Application	SauceDemo
Environment	Production / Staging
Testing Type	Manual Functional Testing
Execution Method	Manual
Browser	Google Chrome
Operating System	macOS
Browser Version	152.0.7977.82
Device	Laptop
Network	Wi-Fi

The Bug Report documents the environment as Production / Staging.

5. Test Execution Summary

A total of 47 test cases were executed across the defined functional modules.

Test Result	Count	Percentage
PASS	43	91.49%
FAIL	4	8.51%
BLOCKED	0	0%
TOTAL	47	100%

The execution results show that the majority of the tested scenarios passed successfully. Four test cases were recorded as failed.

6. Test Result by Module

Module	Result	Summary
Login	7 PASS / 3 FAIL	Most scenarios passed; invalid credential scenarios identified an unclear/truncated error message
Product Listing	PASS	All recorded scenarios passed
Product Detail	PASS	All recorded scenarios passed
Shopping Cart	PASS	All recorded scenarios passed
Checkout	PASS	All recorded scenarios passed
Logout	2 PASS / 1 FAIL	Normal logout passed; session termination scenario failed due to unclear/truncated error message

6.1 Login Testing

The Login module consisted of scenarios covering valid credentials, invalid credentials, empty fields, locked users, password masking, and keyboard-based submission.

Most login scenarios passed successfully. However, the following three test cases failed:

- TC-LOGIN-002 — Invalid username
- TC-LOGIN-003 — Invalid password
- TC-LOGIN-004 — Invalid username and password

The three test cases produced the same observed issue: the login was rejected, but the displayed error message was truncated and unclear.

Because the same issue occurred with different test data, these failures can be associated with the same underlying defect, rather than being counted as three separate defects.

6.2 Product Listing Testing

The Product Listing module scenarios passed successfully.

The testing covered product display, product information, product sorting, and adding products to the shopping cart.

6.3 Product Detail Testing

The Product Detail scenarios passed successfully.

The testing covered accessing product details, verifying product information, adding a product to the cart, and returning to the product listing.

6.4 Shopping Cart Testing

The Shopping Cart scenarios passed successfully.

The tested scenarios included adding products, validating the cart badge, verifying product information, removing products, and navigating between the cart and product listing.

6.5 Checkout Testing

The Checkout scenarios passed successfully.

The testing covered customer information, checkout validation, order summary, product price, subtotal, tax, total calculation, and order completion.

6.6 Logout Testing

The Logout module contained both successful and failed scenarios.

The normal logout scenario passed successfully. However, TC-LOGOUT-002 was recorded as FAIL because the displayed error message was truncated and unclear when attempting to continue after logout.

If this behavior is confirmed to be caused by the same error-message issue identified in the Login module, it should be linked to the same defect rather than reported as a separate defect.

7. Failed Test Cases

The following four test cases were recorded as FAIL:

Test Case ID	Module	Test Condition	Result	Observation
TC-LOGIN-002	Login	Invalid username	FAIL	Error message is truncated and unclear
TC-LOGIN-003	Login	Invalid username	FAIL	Error message is truncated and unclear
TC-LOGIN-004	Login	Invalid username & password	FAIL	Error message is truncated and unclear
TC-LOGOUT-002	Logout	Session termination	FAIL	Error message is truncated and unclear

The three login failures clearly show the same actual result despite different test data.

The logout failure also records an unclear/truncated error message.

Therefore, the number of failed test cases should **not** be directly interpreted as the number of defects.

8. Defect Summary

The provided Bug Report contains two documented defect records.

Bug ID	Problem	Priority	Status
BUG-001	Login error message is truncated and unclear	Low	Open
BUG-002	Footer is not consistently positioned at the bottom of the page	Low	Open

The first documented defect concerns the clarity of the error message displayed after invalid login attempts.

The second documented defect concerns inconsistent footer positioning across pages and viewport sizes.

9. Defect Analysis

BUG-001 — Login Error Message Is Truncated and Unclear

Affected Test Cases:

- TC-LOGIN-002
- TC-LOGIN-003
- TC-LOGIN-004

The same error-message behavior was observed across different invalid login test data.

The expected behavior was that an appropriate error message should be displayed clearly when invalid credentials are submitted. The actual behavior was that the login was rejected, but the displayed error message was truncated and unclear.

Priority: Low

Status: Open

This demonstrates that several test cases can fail because of one common defect.

BUG-002 — Footer Positioning Is Inconsistent

The second documented defect concerns the footer layout.

The footer was expected to remain properly aligned and consistently positioned at the bottom of the page. However, the reported behavior indicates that its position and alignment changed depending on the page or viewport size.

Priority: Low

Status: Open

This defect is documented separately from the failed login test cases.

10. Defect Metrics

Based on the provided Bug Report:

Metric	Result
Documented Defects	2
Open Defects	2
Closed Defects	0
High Priority	0
Medium Priority	0

Low Priority	2
--------------	---

The documented defect count is 2, while the number of failed test cases is 4. This difference is expected because multiple test cases may be affected by the same defect.

11. Test Schedule and Activity Status

Testing Activity	Status
Test Planning	Completed
Test Scenario	Completed
Test Case Design	Completed
Test Execution	Completed
Exploratory Testing	Completed
Bug Report	Not Applicable
Regression Testing	Not Applicable
Test Summary Report	Completed

Retesting and regression testing were not recorded as performed in the provided documentation. Therefore, they are not marked as completed.

12. Overall Testing Assessment

The overall test execution achieved a 91.49% pass rate, with 43 of 47 test cases passing.

The Product Listing, Product Detail, Shopping Cart, and Checkout modules recorded successful results across their tested scenarios. The primary failed scenarios were related to Login and Logout behavior, specifically the presentation of error messages.

Four test cases failed, but these failures should not automatically be interpreted as four separate defects. The three invalid-login failures were caused by the same observed error-message issue.

The Bug Report currently contains two documented defects, both marked Low priority and Open.

Overall, the tested application functionality can be considered mostly functional based on the executed test cases, with some issues requiring further review and resolution.

13. Recommendations

Based on the testing results, the following actions are recommended:

1. **Review the error message displayed during invalid login attempts** and ensure that the message is complete, readable, and clearly communicates the reason for the failed login.

2. **Review the logout/session termination behavior**, particularly the message displayed when attempting to access a restricted or authenticated page after logout.
3. **Review the footer layout** to ensure that its positioning and alignment remain consistent across different pages and viewport sizes.
4. **Perform retesting** after the identified defects have been fixed to verify that the reported issues have been resolved.
5. **Perform regression testing** after fixes to ensure that changes made to the affected functionality do not introduce new issues.
6. Update the Bug Report with the corresponding test case references so that the relationship between failed test cases and defects can be traced more easily.

14. Conclusion

The SauceDemo Manual QA Testing project successfully completed the planned manual functional testing activities for the selected application modules.

A total of **47 test cases** were executed, with the following results:

- **43 PASS**
- **4 FAIL**
- **0 BLOCKED**
- **91.49% Pass Rate**

The four failed test cases do not represent four separate defects. Multiple test cases used different test data but encountered the same underlying error-message issue. Therefore, failed test cases and defects were evaluated separately.

The provided Bug Report contains **2 documented defects**, both currently marked **Open** with **Low priority**.

Based on the test results, the majority of the tested functionalities performed as expected. However, the identified defects should be reviewed and resolved, followed by retesting and regression testing where applicable.

Overall Test Status: COMPLETED — WITH OPEN DEFECTS
